Lies and MisConduct of Tulsa ME Cheryl Niblo (unaccredited office for 12 yrs)

During autopsy of baby Elijah, Detective Elliott attended it directly (and refers to it as "the slicing and dicing" of Elijah)

- The Tulsa ME alleges there was lacerations to Elijah's mouth and it was found by top experts to be normal She did not take tissue samples of these alleged wounds
- The Tulsa ME alleges hemorages (under skin) of ¼" spot and ½" spot on Elijah's back which the top experts found to be non-contemporaneous were likely "dissection artifact" caused by the Tulsa ME herself (¼ x ¼" spot) and the other alleged spot was thought to be a vascular tumor. She failed to use the standard practices of taking tissue samples of these spots as well.
- The Tulsa Me alleges many penetrating blunt force lacerations to the anus which the 2 top experts found to be a completely normal anus w/ no lacerations and again, she skipped taking almost all of the nessesary tissue samples that would be standard w/ such an allegation.

- The Tulsa ME did take an x Ray of Elijah's body and it showed his rectum was full of feces unbroken pattern and undisplaced which make allegations of penetration an impossibility.

- The Tulsa ME discovered a partially expelled "hard, dry stool" in his diaper which would seem to indicate that it was the last thing his living body had ever done - try to push out a hard stool

- The Tulsa ME describes pneumonia in one of his lungs but the mattress pad heavy w/ fluid that drained out of him was never taken from the scene.

- The Tulsa ME describes that there is no petechiae anywhere and none in his eyes which were completely clear.

She reports no depression or deformity to the high points of the face such as nose or chin, no textile patterns, no faint outlines such as found with fingers pressing or blocking airflow or on the back of head, no imprint of teeth inside the mouth or

innerlips, no fabric imprints, no signs of struggle but still asserts that he was murdered by asphyxiation while being Sodomized. Saying that the injuries occured at or near the time of death.

- The detective vacillates in his testimony on the stand throughout his questioning concerning influencing her, questioning her or talking to her directly or indirectly through others.

- Tulsa ME has been approached to be requested to respond concerning the enormous discrepancies in her report w/ that of the experts but has pled the 5th.

- ADA Marnie Hill refers to another ME from Austin who ends up accidently contradicting the Tulsa ME's report on several points making her report look even worse.
